OBJECTIVE

Software Engineer and Open-Source Creator with deep expertise in architecting high-performance enterprise systems. Proven track record in optimizing high-concurrency platforms using proprietary frameworks, asynchronous patterns, and strict coding standards to deliver reliable mission-critical solutions. Passionate about engineering excellence, mentoring teams to reduce technical debt, and driving innovation through scalable software architecture that supports sustained business growth.

EXPERIENCE

Software Engineer | PT Sentra Vidya utama (December 2025 - **Present**)

- Architected high-performance systems using proprietary framework and Memcached
- Decoupled background processes via RabbitMQ to optimize performance
- Developed robust, strictly typed REST APIs adhering to SOLID principles to ensure reliable and seamless system integration
- Tech Stack: PHP (Proprietary Framework & Laravel), PostgreSQL, Memcached, RabbitMQ
- Practices: REST API, SOLID, System Architecture

Software Engineer | PT Javan Cipta Solusi (July 2025 – December 2025)

- Designing and Developing Scalable System Architectures
- Developing High-Quality Code and Conducting Code Reviews
- Collaborating with Cross-Functional Teams and Providing Innovative Solutions
- Tech Stack: PHP (Laravel 10), JavaScript (React.js), Java (Spring Camunda)
- Practices: REST API, SOLID, Agile/Scrum, Camunda BPM

Product Owner | PT Javan Cipta Solusi (November 2024 – July 2025)

- Defined technical requirements and translated them into clear and actionable documentation
- Planned and led sprint activities while maintaining consistent client communication
- Coordinated task assignments to ensure timely delivery and compliance with project standards
- Tools: Metabase, Office 365
- Methodologies: SDLC, Agile/Scrum

Full Stack Developer | PT Javan Cipta Solusi (August 2023 - November 2024)

- Developed modular features to reduce cognitive complexity and enhance maintainability
- Integrated caching strategies that significantly boosted system response time
- Authored comprehensive technical documentation to support knowledge transfer and onboarding
- Tech Stack: PHP (Laravel 10), JavaScript (React.js), Java (Spring Camunda)
- Practices: REST API, SOLID, Agile/Scrum, Camunda BPM

Full Stack Developer | PT Aku Bisa Ibadah (May 2024 – November 2024)

- Developed modular features to reduce cognitive complexity and enhance maintainability
- Integrated caching strategies that significantly boosted system response time
- Authored comprehensive technical documentation to support knowledge transfer and onboarding
- Tech Stack: PHP (Laravel 10), JavaScript (React.js)
- Practices: REST API, SOLID, Agile/Scrum

Project Management Officer | PT Indah Karya (Persero) (January 2023 - August 2023)

- Monitored project KPIs and generated performance reports for early issue detection
- Established standardized procedures to optimize project workflows
- Maintained project documentation and ensured accurate version control
- Tools: Office 365

Full Stack Developer | PT Indah Karya (Persero) (August 2022 - August 2023)

- Developed a tender monitoring platform integrated with the Indonesian LPSE system
- Created a real-time project monitoring system to support transparency and accountability

- Built a secure digital signature application for seamless e-signature generation
- Tech Stack: PHP (Laravel 10)
- Practices: REST API, SOLID, SDLC

Backend & Full Stack Developer | PT Hashmicro Solusi Indonesia
(July 2021 - August 2023)

- Build, and maintain some application with SaaS Technology and RESTful API
- Maintain, and improve website performance in terms of speed, security, user convenience, and others
- Optimized SQL queries for the heavy-load parts of the system which improved website responsiveness
- Languages & Frameworks: PHP (Laravel 8)
- Tools: Slack, Google Meet
- Practices: REST API, SOLID, SDLC

Chief Technology Officer | PT Tradeco Indonesia Karya
(March 2021 - August 2022)

- Assist, design, and establish technical policies and producing the technical components of the strategic planning process
- Design, and develop a website application to show our product to worldwide users utilizing Laravel 8 Framework
- Ensure that the products that have been marketed through the website have passed the Google SEO criteria
- Maintain and improve website performance in terms of speed, security, user convenience, and others
- Languages & Frameworks: PHP (Laravel 8)
- Tools: Slack, Google Meet
- Practices: REST API, SOLID, SDLC

Full Stack Developer | Freelance
(March 2021 - August 2022)

- Used various technologies, including JavaScript to make code repairs and optimize corporate website
- Determined coding requirements for site creation, including e-commerce capability and security and specialized scripts
- Tested websites and performed user testing and troubleshooting prior to live deployment
- Analysed requirements and designed, developed and implemented software applications for multiple websites
- Languages & Frameworks: PHP (Laravel 7, Laravel 8)
- Tools: Slack, Google Meet
- Practices: REST API, SOLID, SDLC

Backend Developer | Travens
(March 2021 – July 2021)

- Responsible for defining, developing, and evolving software in a fast paced and agile development environment using the latest software development methods and infrastructure
- Responsible to build RESTful API
- Languages & Frameworks: PHP (Laravel 7)
- Tools: Slack, Google Meet
- Practices: REST API, SOLID, SDLC

Chief Coordinator & Lecturer Assistant | Geographic Information System Laboratory Faculty of Computer Science, Jember University
(September 2018 – August 2020)

- Lead, and coordinate all laboratory activities
- Monitor the utilization of existing facilities and infrastructure in the laboratory
- Provide an evaluation of the performance results of laboratory members
- Coordinate with related lecturers

Lecturer Assistant | Networking Laboratory Faculty of Computer Science, Jember University
(September 2018 – August 2020)

- Help students to understand the course by live practice
- Assesses student's assignment

Frontend Developer | Annas Florist
(January 2020 – March 2020)

- Built mock up designs, and wireframes for landing, and e-commerce page
- Develop frontend page with modern blade template, HTML, and JavaScript

EDUCATION

Jember University | East Java, Indonesia

Bachelor's degree in information systems, Faculty of Computer Science (June 2017 – June 2021)

- Final project: Conducted research paper on developing website-based integrated village administration systems using Prototype SDLC and UCD Method

- Languages & Frameworks: PHP (Laravel 8)
- Practices: REST API, SOLID, SDLC

TECHNICAL SKILLS

Combining backend expertise with frontend flexibility, I work efficiently across the stack using modern frameworks and best practices:

- Backend:
 - Java (Spring Camunda)
 - Scalable & robust architecture for high-load enterprise applications
 - Integrated workflow engine simplifies business process orchestration
 - Extensive ecosystem with rich libraries and strong community support
 - Achieved ≥ 90 % unit-test coverage using JUnit and Mockito
 - PHP (Laravel)
 - Rapid development using MVC structure and Artisan CLI
 - Built-in tools for authentication, caching, queues, and testing
 - Elegant syntax for clean, maintainable code
 - Ensured ≥ 90 % unit-test coverage with PHPUnit
- Frontend:
 - React.js
 - Reusable components for faster development and consistent UI
 - Virtual DOM ensures high-performance rendering
 - Vast ecosystem of community-driven packages
 - Maintained ≥ 90 % unit-test coverage using Jest & React Testing Library
 - Next.js
 - Server-side rendering (SSR) and static-site generation (SSG) for optimal SEO and load times
 - File-based routing for automatic route creation
 - Full integration with React, including API routes and image optimization
 - Secured ≥ 90 % unit-test coverage via Jest & React Testing Library
 - jQuery
 - Simple DOM manipulation and concise AJAX calls
 - Broad browser compatibility without extra configuration
 - Lightweight and easy to learn for quick UI enhancements
- Databases: PostgreSQL, MySQL, MariaDB
- Practices: RESTful API, SOLID principles, Agile development (Scrum)
- Tools: Git, Metabase, Office 365, Camunda Modeler

CERTIFICATIONS

- Programming & Database
 - o Administrating Database ([Indonesian Professional Certification Authority](#))
 - o Programming ([Indonesian Professional Certification Authority](#))
- HackerRank
 - o SQL Certificate ([HackerRank](#))
 - o Rest API - Intermediate ([HackerRank](#))
 - o Problem Solving Certificate - Intermediate ([HackerRank](#))
 - o Problem Solving Certificate - Basic ([HackerRank](#))

OPEN SOURCE & LIBRARIES

- **Laravel Async Audit Logger** | Creator & Maintainer | [Github](#)

This package provides an asynchronous audit logging system using Redis as a buffer and a Daemon Worker for bulk database insertion. It is designed to handle high-traffic applications where traditional synchronous logging would cause performance bottlenecks.

- **Laravel Advanced CRUD Generator** | Creator & Maintainer | [Github](#)

Designed a modular Laravel package utilizing the Service-Repository Pattern to automate backend scaffolding via custom Artisan commands, implementing Metaprogramming and Reflection API for dynamic database schema validation. The solution features an

abstract filtering and sorting engine optimized to handle complex nested relationship searches without N+1 query issues, while ensuring data integrity through atomic bulk operations secured by database transactions.

PROJECTS

– SiakadCloud Product (PT Sentra Vidya Utama)

Developed a comprehensive cloud-based academic information system for universities, integrating modules for student management, course scheduling, and faculty administration. Implemented a robust backend architecture to support high concurrency and ensure data integrity across multiple campuses.

– E-Sign V2 Platform (PT Sentra Vidya Utama)

Engineered the core backend infrastructure for the centralized E-Sign platform, specifically designing a high-throughput logging system to trace complex vendor integrations and ensure strict audit compliance. Simultaneously developed an asynchronous event-driven notification service utilizing RabbitMQ to decouple email and in-system alerts from main processes. This solution guaranteed reliable delivery of critical status updates during bulk document signing operations, ensuring seamless user communication while maintaining optimal system performance and traceability.

– WhatsApp Blasting Tool (PT Javan Cipta Solusi)

This project involves the development of an internal JAVAN application for broadcasting WhatsApp messages (WA Blasting). The tool is designed with features for comprehensive customer data management and flexible message content management, with the ability to schedule and execute message delivery.

– Internal QA Tools (PT Javan Cipta Solusi)

This project focused on the development of a specialized internal tool for Javan's Quality Assurance (QA) team. The primary goal was to create a centralized platform that streamlines and manages various aspects of the QA workflow. The tool allows QA professionals to manage test cases, track and resolve issues, oversee software releases, and organize and execute test runs, providing a comprehensive solution for their daily tasks. By consolidating these functions, the tool enhances the team's efficiency and improves the overall quality of software products.

– Anti-Corruption Complaint Handling System (PT Javan Cipta Solusi & Komisi Pemberantasan Korupsi RI)

Involved in the maintenance of the KPK-KWS 2023 application and its supporting systems, which are used for managing public complaints related to corruption cases. Ensured system stability and performance to support effective case handling by the authorities.

– Ops Console Enhancements (PT Javan Cipta Solusi & PT Bank Rakyat Indonesia Tbk)

Contributed to the enhancement of BRI's Ops Console system, focusing on the Manual Reconciliation module to accelerate and simplify the transaction review process. Also worked on the RTGS (Real-Time Gross Settlement) module, enabling BRI to monitor and assess transactions integrated with Bank Indonesia. Delivered strategic and insightful dashboards to support executive decision-making.

– Internal Data Validation Platform for Telco Integration (PT Javan Cipta Solusi, PT Linknet & PT XL Axiata)

Developed the Interval System for PT Linknet, designed to validate HPDB data prior to submission to PT XL Axiata's LMS application. This new system streamlined data submission processes, ensuring compatibility with LMS validation requirements, and significantly improved operational efficiency for the Linknet team.

– HRM Implementation (PT Javan Cipta Solusi & CV Kunikita Persada)

Led the implementation of an HRM module fully integrated with Odoo ERP to automate and optimize employee monitoring at CV Kunikita Persada. This integration enabled real-time synchronization of attendance, leave, and payroll data, significantly reducing administrative workload, enhancing data accuracy, and accelerating processes. As a result, team productivity increased, and management gained the ability to make swift, data-driven decisions, fostering a more dynamic, transparent, and competitive work environment.

– LPSE Monitoring (PT Indah Karya (Persero))

Developed a comprehensive platform to track tender projects across more than 50 LPSE websites, providing real-time updates and insights based on specific project criteria. This tool streamlined the process of monitoring project opportunities, enhancing the organization's competitive edge in securing tenders.

– Project Monitoring (PT Indah Karya (Persero))

Designed and implemented a robust system to monitor the progress of ongoing projects at PT Indah Karya, covering both physical and financial aspects. This platform helped ensure that projects were completed on time and within budget by providing real-time status updates and actionable insights for proactive project management.

– **Link Shortener** (PT Indah Karya (Persero))

Developed a secure and efficient URL shortening tool to streamline the sharing of official links. The platform not only shortened long URLs but also improved the credibility of links shared by PT Indah Karya, ensuring that they were recognized as official and trustworthy.

– **Bank Integration** (PT Hashmicro)

Created a dynamic website that integrates various banking services into a unified platform. This solution enabled seamless transactions such as intra-bank and inter-bank transfers, mutation checks, virtual account payments, and other banking functionalities, providing a comprehensive digital banking experience for users.

– **Clubfood Co** (PT Hashmicro)

Developed a platform that aggregates and integrates restaurant menus, ratings, and other relevant data from multiple food delivery platforms such as GrabFood, GoFood, and Traveloka Food. This project aimed to simplify access to essential restaurant information, improving the user experience and facilitating better decision-making for both consumers and food service providers.
